

Regression Checklist

Run through these tests before signing off on Milestone 6.

M1: Core Reading Experience

- ☒ Verify all 114 surahs load correctly.
- ☒ Check Arabic text rendering with Uthmani script and diacritics.
- ☒ Hover/tap Arabic word shows English meaning and transliteration.
- ☒ Translations toggle correctly (Saheeh Intl. vs Clear Quran).
- ☒ Switching between verse-by- and continuous modes works.
- ☒ Arabic font style (Hafs/Amiri) and text versesize adjustments work.
- ☒ Light/Dark mode toggles and persists.
- ☒ Direct linking to specific ayah (e.g., `/2/255`) scrolls to correct verse.
- ☒ Copy and Share ayah buttons work.

M2: Audio & Recitation

- ☒ Audio plays correctly for all 20 reciters. (id 8, Al-Minshawi Mujawwad, removed 2026-08-14 — upstream QDC/BunnyCDN 404s on every chapter; re-add once fixed and bump back to 21)
- ☒ Persistent mini player works across pages.
- ☒ Word-by-word highlight syncs with audio (for supported reciters).
- ☒ Click-to-hear word pronunciation works.
- ☒ Repeat ayah/range works. (fixed: manual navigation during an active repeat now cancels it instead of snapping back)
- ☒ Playback speed controls work.
- ☒ Quran Radio (`/radio`) plays continuously. (fixed: stale/active repeat state could stall radio on one chapter forever)

M3: Study Tools

- ☒ Tafsir panel loads and displays content (5 books).
- ☒ Tajweed colour coding toggles correctly on Arabic text.
- ☒ Keyword search (`/search`) returns accurate Arabic/English results.
- ☒ Word morphology (root, lemma, grammatical form) displays correctly on click. (fixed: ~25 grammar feature codes were leaking as raw untranslated chips, e.g. "MS"/"MP" instead of "Masculine Singular"/"Masculine Plural")
- ☒ Asbab al-Nuzul (reasons for revelation) displays where available.

M4: Accounts & Personal Features

- ☒ Registration, Login, and Logout flows work.
- ☒ Password reset flow works. (hardened: timing-based email enumeration fixed; sessions now revoked on password change)
- ☒ Account settings (change email, password) function correctly. (hardened: email change now also revokes stale sessions, matching password change)

- ☒ Adding/removing bookmarks and collections works. (fixed: closed a TOCTOU gap that could orphan a bookmark against a concurrently-deleted custom collection)
- ☒ Adding/editing/deleting private per-ayah notes works. (fixed: closed a count-limit race in notes, and fully closed the same class of race in bookmarks — count check is now transactional in both)
- ☒ "Continue where you left off" prompt redirects accurately.
- ☒ Reading progress, daily goals, and streaks update correctly. (fixed: day boundary now uses the user's local timezone instead of UTC; non-contiguous reading no longer inflates the daily count)
- ☒ Media Maker (`/media-maker`) generates and exports image successfully.
- ☒ Reading, audio, and study features work for logged-out (guest) users.

M5: Expansion

- ☒ 10 translations load correctly.
- ☒ 5 tafsir books load correctly.
- ☒ "Hide Arabic" mode for memorisation testing toggles correctly.
- ☒ Hifz progress tracker updates correctly by surah/juz (`/account/hifz`). (fixed: closed the same count-limit race already fixed in bookmarks/notes)
- ☒ Range repeat includes pause between repetitions (for memorisation). (fixed: play/pause and scrubber seeks during a pause gap no longer leave a stray timer that yanks playback backward later)

M6: Polish & Performance

- ☒ Initial load < 3s.
- ☒ Audio start < 2s.
- ☒ Cross-browser testing passed.
- ☒ Cross-device testing passed.
- ☒ Full regression test across all milestones.
- ☒ Final README with full tech stack + data sources + deployment.
