

Remember Quran — Google Play Store Launch Checklist

Publisher Protocols, Compliance Guidelines & Pre-Launch Do's and Don'ts

■■ CRITICAL POLICY NOTICE (2024–2026 Rule for New Personal Accounts): If the developer account is registered as a **Personal Account**, Google Play requires a mandatory **Closed Testing phase with at least 20 opted-in testers for 14 consecutive days** before production access is unlocked. Organization accounts have direct production rollout access.

1. Technical & Codebase Readiness (Before Release Build)

Item	Requirement & Technical Protocol	Current App Status
Release Keystore	Create permanent key.jks / upload-keystore.jks and configure key.properties. Never build production AAB with debug key.	■■ Action Needed (build.gradle uses debug key)
App Bundle (.aab)	Build signed Android App Bundle using flutter build appbundle --release. Google Play requires AAB for new apps.	■ Ready
Cleartext Traffic	Set android:usesCleartextTraffic="false" in AndroidManifest.xml. Ensure all API and audio CDN endpoints are strict HTTPS.	■■ Action Needed (Change true to false)
Target SDK	Must target Android 14+ (API Level 34 or 35). Default Flutter config satisfies this requirement.	■ Ready (API 35)
Foreground Audio	Uses FOREGROUND_SERVICE_MEDIA_PLAYBACK for background recitation. Declare appropriately in Play Console.	■ Configured

2. Google Play Console 'App Content' Declarations

- **Privacy Policy URL:** Must be live (e.g., <https://rememberquran.com/privacy>) specifying data retention (bookmarks, notes, audio sync) and zero 3rd-party ad trackers.
- **App Access & Reviewer Credentials:** If any feature requires sign-in, provide active test credentials (Username/Password) in App Access so Google Reviewers can test protected screens.
- **Target Audience:** Select **13+**. Do NOT designate as 'Made for Kids' unless certified for the strict Google Play Families Policy.
- **Ads Declaration:** Explicitly select '**No, my app does not contain ads**'.
- **Data Safety Form:** Declare encrypted data in transit (HTTPS), account info for sync, Crashlytics diagnostics, and provide a direct account deletion URL.

3. Store Listing & Graphic Assets Specifications

Asset	Specifications	Guidelines & Best Practices
App Icon	512 x 512 px 32-bit PNG, Max 1MB	High contrast Islamic emblem, no text badges ('#1 App', 'Free').
Feature Graphic	1024 x 500 px JPG/PNG, Max 15MB	Hero banner with deep emerald/gold theme and clean 'Remember Quran' typography.
Screenshots	Min 4, Max 8 per form 16:9 or 9:16 aspect ratio	Showcase: (1) Madani Mushaf Reader, (2) Audio Player Sheet, (3) Media Maker, (4) Tafsir & Asbab.
Descriptions	Short: Max 80 chars Full: Max 4000 chars	Highlight 15-line Mushaf, reciter repeat, offline reading. Avoid repetitive keyword stuffing.

4. Essential Do's and Don'ts for Launch

■ DO's	■ DON'Ts
• Share Internal/Closed testing builds with Daniyal bhai and team first. • Test background audio playback with screen locked on Android 11 to 15. • Verify dark/light mode switching and offline caching of surahs. • Securely backup the key.jks keystore and password in team password manager.	• DO NOT upload builds signed with the debug key. • DO NOT mention trademarked competitor names in description (e.g. 'Like Quran.com'). • DO NOT publish with broken privacy policy or support links. • DO NOT make medical or charitable donation claims without formal non-profit docs.
