

QA ISSUE TRACKER — RememberQuran Mobile App (All Milestones)

QA Officer: Hafiz Saad | Developer: Haseeb Sajjad | Project: RememberQuran Mobile App | Date: 20/08/2026 | Prefix: RQM- (fold into RQ- if preferred)

Issue No.	Identified Date	Resolution Date (QA only)	Status	Assigned To	Section/Page	Issue	Detail of the Issue	Required Correction	Response from Developer	QA Notes
RQM-01	20/08/2026		Needs Clarification	Haseeb Sajjad	Account System	Notes/Bookmarks Persistence After Logout — Contradictory Findings	Milestone 4 testing explicitly found notes do NOT persist after logout ("Not available after logging out"). Milestone 6's later end-to-end journey, testing the identical scenario, found the opposite ("confirmed" — still there).	Re-test this specific scenario directly and confirm definitively which result is accurate before this item is closed either way.		Direct match to a stated Red Flag. Given the severity, should not be assumed fixed or broken without a clear, deliberate re-test.
RQM-02	20/08/2026		Open	Haseeb Sajjad	Audio / Navigation	Surah Auto-Advance Shows Error and Skips a Surah	When a surah finishes playing and the app auto-advances to the next one, it shows an error and additionally skips a surah entirely (observed jumping from Surah 1 to Surah 3, missing Surah 2).	Fix the auto-advance/surah-transition logic so it moves to the correct next surah without error and without skipping.		
RQM-03	20/08/2026		Open	Haseeb Sajjad	Navigation	Surah Index Shows Only 8 of 114 Surahs	The surah list/index in the app displays only 8 surahs rather than all 114.	Populate the full 114-surah index with number, Arabic name, English name, and ayah count for each.		
RQM-04	20/08/2026		Open	Haseeb Sajjad	Navigation	No Way to Jump Directly to a Specific Ayah	There is no ayah-level indexing or search allowing a user to jump directly to a specific ayah (e.g. Surah 2, Ayah 255).	Build ayah-level navigation so users can jump directly to any surah:ayah reference.		
RQM-05	20/08/2026		Open	Haseeb Sajjad	Navigation	No Previous/Next Surah Buttons	There is no previous/next surah navigation control while reading.	Add previous/next surah buttons to the reading view.		
RQM-06	20/08/2026		Open	Haseeb Sajjad	Audio Controls	Reciter Selection Unavailable in Reading Mode	Reciter selection is not available in the main reading/listening context — it only exists within the separate Quran Radio feature.	Add reciter selection to the reading-mode audio experience, not just Radio.		Independently reconfirmed during Milestone 5 testing of additional reciters.
RQM-07	20/08/2026		Open	Haseeb Sajjad	Audio Controls	Continuous Full-Surah Playback Missing	There is no way to play a full surah continuously, ayah after ayah — only single-ayah playback is available.	Add continuous full-surah playback.		
RQM-08	20/08/2026		Open	Haseeb Sajjad	Audio Controls	Persistent Mini Audio Player Missing	There is no persistent mini audio player allowing playback to continue while scrolling/reading elsewhere.	Add a persistent mini player that stays visible while audio plays.		
RQM-09	20/08/2026		Open	Haseeb Sajjad	Audio Controls	Ayah Repeat (Single + Range) Missing	Neither single-ayah repeat nor custom-range repeat is available.	Add both single-ayah repeat and custom ayah-range repeat with a settable repeat count.		
RQM-10	20/08/2026		Open	Haseeb Sajjad	Audio Controls	Playback Speed Control Missing	There is no control to adjust playback speed (e.g. 0.75x, 1.5x).	Add playback speed control.		
RQM-11	20/08/2026		Open	Haseeb Sajjad	Study Tools	Tafsir Missing Entirely	No tafsir is available anywhere in the app — neither the base Ibn Kathir tafsir nor the additional tafsir books expected from Milestone 5.	Implement tafsir display per ayah, matching the web platform's tafsir functionality.		Independently confirmed across three separate test sections (Milestones 3, 5, and the Milestone 6 end-to-end journey).
RQM-12	20/08/2026		Open	Haseeb Sajjad	Study Tools	Word Morphology/Grammar Panel Missing	There is no way to view a word's root and grammatical form.	Implement the word morphology/grammar panel present on web.		
RQM-13	20/08/2026		Open	Haseeb Sajjad	Study Tools	Reasons for Revelation Missing	No reason-for-revelation information is available for any tested ayah.	Implement reasons-for-revelation content where available, matching web.		

QA ISSUE TRACKER — RememberQuran Mobile App (All Milestones)										
QA Officer: Hafiz Saad Developer: Haseeb Sajjad Project: RememberQuran Mobile App Date: 20/08/2026 Prefix: RQM- (fold into RQ- if preferred)										
Issue No.	Identified Date	Resolution Date (QA only)	Status	Assigned To	Section/Page	Issue	Detail of the Issue	Required Correction	Response from Developer	QA Notes
RQM-14	20/08/2026		Open	Haseeb Sajjad	Account System	Password Reset Email Not Arriving	Using "Forgot password" does not result in a reset email arriving.	Fix password-reset email delivery.		
RQM-15	20/08/2026		Open	Haseeb Sajjad	Account System	Bookmark Collection Assignment Not Available While Saving	There is no option to select which collection a bookmark should be saved into at the time of saving — all bookmarks default into the first collection regardless of intent.	Add collection selection to the bookmark-saving flow, and ensure bookmarks are correctly organised by collection on the bookmarks page.		
RQM-16	20/08/2026		Open	Haseeb Sajjad	Account System	Clicking a Bookmark Doesn't Open the Ayah	Clicking a saved bookmark does not navigate to the corresponding ayah.	Fix bookmark click-through so it correctly opens the associated ayah.		
RQM-17	20/08/2026		Open	Haseeb Sajjad	Account System	Reading Streak Doesn't Update	After completing the reading task needed to progress a streak, the streak is not updated in the app.	Fix streak-tracking logic so completed reading activity correctly updates the visible streak.		
RQM-18	20/08/2026		Open	Haseeb Sajjad	Media Maker	Missing Branding and No Download Option	The generated shareable ayah image does not include RememberQuran.com branding, and there is no option to download the image directly — only a share button is available.	Add the RememberQuran logo/branding to generated images, and add a direct download option alongside share.		Also less accessible than on web (reachable directly from the reading page there) — a UX convenience note, not a functional defect.
RQM-19	20/08/2026		Open	Haseeb Sajjad	Memorisation Tools	Largely Unimplemented	Several memorisation-mode capabilities are missing: selecting a range of ayahs for hide/reveal, setting a repeat count for a memorisation range, and a memorised-ayah progress tracker. Basic single-ayah reveal does work correctly.	Implement range selection for hide/reveal, range-repeat for memorisation, and the memorised-ayah tracker.
